EDUCATION

James Cook University

Bachelor of Commerce in Banking and Finance, Minor in Psychology

Singapore

May. 2025 – Sep. 2027(Expected)

University of Groningen

Bachelor of Science in Astronomy(Partially Completed)

Groningen, Netherlands

Sep. 2020 – Dec. 2024

SELECTED PROJECTS

The Cosmic rays Mechanism and Model Explanation

Jan 2023

- This project is to test the model: The Leaky Box Model, the data is from AMS-02(Alpha Magnetic Spectrometer-02)
- The data is leveraged to conduct a nonlinear model fit, maximum likelihood method, approximate parameter uncertainty, residual diagnostics are performed to evaluate the model

Simulation in Hydrodynamics

Nov 2022

- Simulations of one-dimensional fluid dynamics, exploring shock propagation through Sod shock-tube and blast-wave problems.
- Simplified finite element method is used to simulate the density and velocity of the system
- Infinite and oscillation results are encountered in simulated behavior, which will be revisited

Cosmic MicroWave Background Temperature Measurement

Sep 2023

- The Cosmic MicroWave Background Temperature is estimated based on the data collected using the radio-telescope with mirror diameter of 25m at ASTRON(Netherlands Institute for Radio Astronomy)
- Applied hot-cold load calibration to determine receiver noise temperature and convert measured power into system temperature.

EXPERIENCE

Teaching Assistant for Undergraduate Course: Electromagnetism

Sep 2021 – Dec 2021

University of Groningen

Groningen, The Netherlands

- Electromagnetism is an essential undergraduate course for students majoring in physics and astronomy
- The task includes guide fellow students through the pre-determined tutorial questions and answer the questions put forward by folks

Observational Astronomy Experience

Dec. 2022

University of Groningen

Groningen, Netherlands

- This is group practical experience at Blaauw Observatory in Zernike Campus
- The task for me is to adjust the telescope angle to align with the object, which is a binary star system
- The passing time of one star through the other is estimated based on optical information gathered from telescope and an observational report is written

TECHNICAL SKILLS

Familiar Languages: Python, C/C++, SQL, JavaScript, HTML/CSS, R

Developer Tools: Git, Codex, Cursor, Visual Studio, PyCharm, Cmake, Docker
